

INDEX to VOL. XVIII.

- ACOUSTICAL** insulation afforded by double partitions constructed from similar components, 321.
- Actinium series, the ultimate origin of, 256.
- Adsorbed moisture films on glazed porcelain, the surface resistivity of, 63.
- Algebraic equations, the solution of, by means of tables of logarithms, 529.
- Allen (J.) on the ratio of the maximum to the mean velocity, and the position of the filament of mean velocity, in the laminar motion of an incompressible viscous fluid through a pipe of rectangular cross-section, 488.
- Alternating and pulsating currents in a loaded telephone cable, 288.
- Araki (G.) on the intensity distribution of sound from a tuning-fork, 441.
- Arsenic-tin system of alloys, an X-ray investigation of, 114.
- Atomic constants and X-ray levels, 1086.
- nuclei, the structure of, 129.
- positions in paradinitrobenzene, determination of, by Fourier analysis method, 1004.
- Baggett (E. A.) and Levy (Prof. H.), characteristic numbers, functions, and orthogonal properties of difference equations, 177.
- Bailey (Prof. V. A.), the study of the magneto-ionic theory of wave-propagation by means of conformal representation, 516.
- , the solution of algebraic equations by means of tables of logarithms, 529.
- and Martyn (Dr. D. F.), the influence of electric waves on the ionosphere, 369.
- Banerjee (K.), the determination of the atomic positions in paradinitrobenzene by Fourier analysis method, 1004.
- Bennett (W. R.) and Rice (S. O.), note on methods of computing modulation products, 422.
- Benzene-air and methyl alcohol-air mixtures, the thermal properties of, 554.
- Benzoic acid, determination of the thermodynamic dissociation constant, at 25°, from conductivity measurements, 901.
- Bhatnagar (Prof. S. S.), Mitra (N. G.), and Tuli (G. D.) on the atomic diamagnetic susceptibility of hydrogen, 449.
- Black-body radiator, the blackness of, 561.
- Blackman (Dr. M.) on the optical properties of thin films, 262.
- , the influence of crystal forces on the vibration of a complex ion, 425.
- Books, new:—N. F. Mott and H. S. W. Massey's *The Theory of Atomic Collisions*, 207; Prof. E. W. Brown and C. A. Shook's *Planetary Theory*, 405; H. W. Edwards's *Analytic and Vector Mechanics*, 407; Prof. E. Jahnke and Prof. F. Emde's *Funktionentafeln*, *Tables of Functions*, 408; Sir James Jean's *The New Background of Science*, 524; Dr. J. W. Mellor's *Uncle Joe's Nonsense for Young and Old Children*, 524; Prof. H. F. Baker's *The Principles of Geometry*.—Vol. VI., 525; Rudolf Carnap's *L'ancienne et la nouvelle logique*, 527; Philipp Frank's *Théorie de la connaissance et physique moderne*, 527; Moritz Schlick's *Les énoncés scientifiques*

- et la réalité du monde extérieur, 527; Prof. W. Wilson's Theoretical Physics.—Vol. II. Electromagnetism and Optics (Maxwell-Lorentz), 528; Dr. J. Tutin's The Atom, 724; Prof. Leonard B. Loeb and Arthur S. Adams's The Development of Physical Thought, 726; Prof. W. Swietoslawski's Thermochimie, 727; Prof. G. A. Bliss's Algebraic Functions: American Mathematical Society Colloquium Publications.—Vol. XVI., 728; J. E. Nyrop's A Treatise on the Catalytic Action of Surfaces, 842; Prof. P. W. Bridgman's The Thermodynamics of Electrical Phenomena in Metals, 842; A. S. Ramsey's Statics, 843; H. F. Biggs's The Electromagnetic Field, 843; T. Y. Thomas's The Differential Invariants of Generalized Spaces, 844; Dr. Vaughan Cornish and Dr. Harold Jeffreys's Ocean Waves and kindred Geophysical Phenomena, 1161; Dr. J. W. Mellor's A Comprehensive Treatise on Inorganic and Theoretical Chemistry.—Vol. XIII., 1162; Prof. D. M. Y. Sommerville's Analytical Geometry of Three Dimensions, 1163; Prof. Niels Bohr's Atomic Theory and the Description of Nature, 1164.
- Boulind (H. F.), corona discharges in various gases, 909.
- Boundary problems in mathematical physics, on the solution of, 624.
- Brillouin's unified statistics, note on modification of, 192.
- Broadening of spectral lines and pressure shift, 987.
- Butler (Dr. J. A. V.) and Orr (W. J. C.), factors determining electrolytic dissociation and the energy of dissociation of salt molecules, 778.
- Carnegie (W.) on a new method for determining the electron diffraction patterns produced by thin films, 956.
- Celluloid films, the structure of thin.—III., 291.
- Churcher (B. G.), King (A. J.), and Davies (H.), the minimum perceptible change of intensity of a pure tone, 927.
- Clark (C. H. D.), interconversion scale; energy, temperature, and atomic weight, 80.
- , on the relation between vibration frequency and nuclear separation for some non-hydride diatomic molecules, 459.
- Clean-up of various gases by magnesium, calcium, and barium, 1117.
- Collector analysis of discharge-tubes, an alternating current method for, 193.
- Combination coefficients, the theory of, for large ions and for uncharged particles at any pressure, 97.
- Condensation of thin metallic films, some reflexion observations, 241.
- Condenser discharge, sound radiation from, 25.
- Conformal representation, study of the magneto-ionic theory of wave-propagation by means of, 516.
- Constable (Dr. J. E. R.), the acoustical insulation afforded by double partitions constructed from similar components, 321.
- Copper, cold-worked, latent energy due to lattice distortion of, 495.
- Copper-magnesium system, the Cu_2Mg phase, 343.
- Cornish (R. J.) and Jones (E.) on the elastic bending of a curved rectangular bar under direct stress, 456.
- Corona discharges in various gases, 909.
- Correlation of time-series, note on the, 545.
- Cosmic rays, a theory of the origin of, 971.
- Crystal forces, the influence of, on the vibration of a complex ion, 425.
- Crystallite orientation in a polycrystalline metal during plastic flow, 949.
- Cunnold (F. A.) and Milford (M.), the blackness of a black-body radiator, 561.
- Cylindrical shells, deformation of, subjected to internal loading, 1099.
- David (Prof. W. T.) and Jordan (Dr. J.) on flame temperatures in methane-air mixtures, 228.

- David (Prof. W. T.) and Leah (Dr. A. Smeeton), the specific heats of gases at high temperatures, 307.
- Davies (H.), the determination of the stimulus-sensation relation for audition from data on the minimum perceptible changes of intensity, 940.
- , Churcher (B. G.), and King (A. J.) on the minimum perceptible change of intensity of a pure tone, 927.
- Davies (R. M.) and James (Dr. E. G.), a study of an electrically-maintained vibrating reed and its application to the determination of Young's modulus. —Part I. Theoretical, 1023; Part II. Experimental, 1053.
- Dean (W. R.), note on the divergent flow of fluid, 759.
- Deformation of thin cylindrical shells subjected to internal loading, 1099.
- Dhar (Dr. S. C.) and Shastri (N. A.) on the parabolic cylinder functions, 401.
- Diamagnetic susceptibility of hydrogen, 449.
- Difference equations, characteristic numbers, functions, and orthogonal properties of, 177.
- Diffraction of slow electrons by crystals, a new method of investigating the, 878.
- Discharge-tubes, an alternating current method for collector analysis of, 193.
- Divergent flow of fluid, note on the, 759.
- Dufton (A. F.), the graphic computation of the strength of windows, 792.
- Dwight (C. H.) on the diurnal variation of the space charge and its effect upon the potential gradient, 719.
- Eddy current heating, applications of the *ker* and *kei* functions, 610.
- Ehrenberg (Dr. W.) on a new method of investigating the diffraction of slow electrons in crystals, 878.
- Elastic bending of a curved rectangular bar under direct stress, 456.
- Electric arc, note on the, 365.
- waves, the influence of, on the ionosphere, 369.
- Electrolytes, completely dissociated, an apparent paradox in the theory of heats of dilution of, 46.
- Electrolytic dissociation, factors determining, 778.
- Electron diffraction patterns produced by thin films, a new method for determining the, 956.
- energies in the negative glow, note on, 874.
- Emeléus (K. G.) and Kennedy (D.), note on electron energies in the negative glow, 874.
- Emission spectra of the vapours of the sodium and potassium halides, 1134.
- Energy of dissociation of salt molecules, 778.
- , temperature, and atomic weight: a rapid interconversion scale, 80.
- Eropkin (D.) on the distribution of energy in the ultra-violet solar spectrum as inferred from the photochemical theory of the ozone equilibrium in the earth's atmosphere, 838.
- Evans (Prof. E. J.) and Jones (G. E.), the magneto-optical dispersion of normal butylacetate, methyl acetate and ethyl acetate in the ultra-violet region of the spectrum, 386.
- and Willott (W. A.) on an X-ray investigation of the arsenic-tin system of alloys, 114.
- Falling plate, photographic time registration in an experimental determining of "*g*," 352.
- Force, the concept of, in wave mechanics, 1150.
- Flame temperatures in methane-air mixtures, 228.
- Foster (Dr. Alan W.) on the temperature variation of the thermoelectric properties and the specific heat of nickel-chromium alloys, 470.
- Fox (E. N.), two problems arising in practical applications of heat theory, 209.
- "*g*," an experimental determination of, by photographic time registration on a falling plate, 352.
- Gatty (O.), an apparent paradox in the theory of the heats of dilution of completely dissociated electrolytes, 46.
- on membrane equilibria and the phase rule, 273.

- Gibbs (Dr. R. E.) and Ramlal (N.), crystallite orientation in a polycrystalline metal during plastic flow, 949.
- Gill (E. W. B.), the theory of ultra-short wave generators, 832.
- Glow discharge, high-frequency, 696.
- Graphic computation of the strength of windows, 792.
- Green (Dr. G.), the sources of various kinds near a plane boundary separating two different media, 625.
- Halides, the emission spectra of the vapours of sodium and potassium, 1134.
- Hamada (H.) on the emission spectra of the vapours of sodium and potassium halides, 1134.
- Harmonic analysis of sound-frequency oscillations with a stroboscopic disk, 303.
- Harper (Dr. W. R.) on the theory of the combination coefficients for large ions and for uncharged particles at any pressure, 97.
- Heat theory, two problems arising in practical applications of, 209.
- Heat-conduction from a spherical source, on the solution of a problem in, by the method of wave-trains, 165.
- , on the solutions of problems in, by the method of wave-trains, 1009.
- Heats of dilution of completely dissociated electrolytes, an apparent paradox in the theory of, 46.
- Helium, ionization by positive ions in, 594.
- High-frequency glow discharge, 696.
- Hill (Dr. A. G.), the magnetic effects in iron crystals, 539.
- Huxley (Dr. L. G. H.) on a theory of the origin of cosmic rays, 971.
- Hydrogen lines, general expression for the intensity of, 845.
- , the atomic diamagnetic susceptibility of, 449.
- Hydroxyl, preparation of free, 409.
- Hyperfine-structure of spectrum lines of manganese arc in vacuum.—Part I., 1144.
- Inner potential, measurement of mean, 656.
- Integral, definite, involving Legendre functions, 1158.
- Intensity of a pure tone, the minimum perceptible change of, 927.
- Intensity of hydrogen lines, general expression for, 845.
- Interconversion scale, energy, temperature, and atomic weight, 80.
- Ionization by positive ions in helium, 594.
- Ionosphere, the influence of electric waves on the, 369.
- Ionospheric heights at Calcutta during the polar year 1932-33, report on measurement of, 675.
- Iron crystals, magnetic effects in, 539.
- Jackson (W.), the skin effect in rectangular conductors at high frequencies, 433.
- James (Dr. E. G.) and Davies (R. M.), a study of an electrically-maintained vibrating reed and its application to the determination of Young's modulus.—Part I. Theoretical, 1923; Part II. Experimental, 1053.
- Jeffery (G. H.) and Vogel (Dr. A. I.) on the determination of the thermodynamic dissociation constant of benzoic acid, at 25°, from conductivity measurements, 901.
- Johnson (F. W.) on the surface resistivity of adsorbed moisture films on glazed porcelain, 63.
- Jones (E.) and Cornish (R. J.) on the elastic bending of a curved rectangular bar under direct stress, 456.
- Jones (Prof. E. Taylor), the structure of thin celluloid films, III., 291.
- Jones (G. E.) and Evans (Prof. E. J.), the magneto-optical dispersion of normal butyl acetate, methyl acetate, and ethyl acetate in the ultra-violet region of the spectrum, 386.
- Jordan (Dr. J.) and David (Prof. W. T.) on flame temperatures in methane-air mixtures, 228.
- Kennedy (D.) and Emeléus (Prof. K. G.), note on electron energies in the negative glow, 874.
- Ker and kei functions, polar form, with applications to eddy current heating, 610.
- King (A. J.), Davies (H.), and Churcher (B. G.) on the minimum perceptible change of intensity of a pure tone, 927.
- Kothari (D. S.), note on modification of Brillouin's unified statistics, 192.

- Kuhn (H.), pressure shift and broadening of spectral lines, 987.
 — and London (F.) on the limitation of the potential theory of the broadening of spectral lines, 983.
- Laminar motion of an incompressible viscous fluid through a pipe of rectangular cross-section, the ratio of the maximum to the mean velocity and the position of the filament of mean velocity, 488.
- Langton (E.) and Tyler (Dr. E.), photographic time registration on a falling plate in an experimental determination of "*g*," 352.
- Latent energy due to lattice distortion of cold-worked copper, 495.
- Lattice distortion of cold-worked copper, latent energy due to, 495.
- Leah (Dr. A. Smeeton) and David (Prof. W. T.), the specific heats of gases at high temperatures, 307.
- Legendre functions, on some definite integrals involving, 1158.
- Levy (Prof. H.) and Baggett E. A.), the characteristic numbers, functions, and orthogonal properties of difference equations, 177.
- Light, discrete structure of, and the photographic intermittency effect, 1.
 — elements, radioactivity of, 156.
- London (F.) and Kuhn (H.) on the limitation of the potential theory of the broadening of spectral lines, 983.
- Lorentz transformation, generalization of, 187.
- McFarlane (W.) on the sound radiation from a condenser discharge, 24.
- MacGregor (E. I. R.) and Sloane (R. H.) on an alternating current method for collector analysis of discharge-tubes, 193.
- McLachlan (Dr. N. W.) and Meyers (A. L.), the polar form of the *ker* and *kei* functions, with applications to eddy current heating, 610.
- McLean (L.), a general expression for the intensity of hydrogen lines, 845.
- Magnetic effects in iron crystals, 539.
- Magneto-ionic theory of wave-propagation by means of conormal representation, 516.
- Magneto-optical dispersion of organic liquids in the ultra-violet region of the spectrum.—Part VIII. The magneto-optical dispersion of normal butyl acetate, methyl acetate, and ethyl acetate, 386.
- Manganese arc in vacuum, hyperfine-structure of spectrum lines of.—Part I., 1144.
- Marro (Dr. M.), alternating and pulsating currents in a loaded telephone cable, 288.
 — on pulsating currents telephony, 571.
- Martyn (Dr. D. F.) and Bailey (Prof. V. A.), the influence of electric waves on the ionosphere, 369.
- Membrane equilibria and the phase rule, 273.
- Mercury arc at liquid air temperature, 607.
- Metallic films, condensation of thin : some reflexion observations, 241.
- Methane-air mixtures, flame temperatures of, 228.
- Meyers (A. L.) and McLachlan (Dr. N. W.), the polar form of the *ker* and *kei* functions, with applications to eddy current heating, 610.
- Micro-calorimetry, considerations on, 745.
- Milford (M.) and Cunnold (F. A.), the blackness of a black-body radiator, 561.
- Mitra (N. G.), Tuli (Gopal Das), and Bhatnagar (Prof. S. S.) on the atomic diamagnetic susceptibility of hydrogen, 449.
- Modulation products, note on methods of computing, 422.
- Mohammad (Prof. W.) and Sharma (P.), the hyperfine-structure of spectrum lines of manganese arc in vacuum.—Part I., 1144.
- Morgan (Dr. J. D.), an experiment relating to the thermal and electrical theories of spark ignition, 827.
- Morrison (Prof. J. T.), note on the correlation of time-series, 545.
- Negative glow, note on electron energies in, 874.
- Nemes (T. D.) on the harmonic analysis of sound-frequency oscillations with astroboscopic disk, 303.

- Neufeld (J.) on the solution of boundary problems in mathematical physics, 624.
- Newman (Prof. F. H.), note on the electric arc, 365.
- , on the mercury arc at liquid air temperature, 607.
- Nickel-chromium alloys, the temperature variation of the thermoelectric properties and the specific heat of, 470.
- Nielsen (G. S.) on the transverse thermomagnetic effect: a method of measurement, 575.
- Nuclear separation and vibration frequency, the relation between, for some simple non-hydride diatomic molecules, 459.
- synthesis and radioactivity, 795.
- Open wire transmission lines, radiation characteristics of, 236.
- Optical properties of thin films, 262.
- Orr (W. J. C.) and Butler (Dr. J. A. V.), factors determining electrolytic dissociation and the energy of dissociation of salt molecules, 778.
- Oscillations, harmonic analysis of sound-frequency with a stroboscopic disk, 303.
- Ozone equilibrium in the earth's atmosphere, the photochemical theory of, 838.
- Parabolic cylinder functions, 401.
- Paradinitrobenzene, determination of the atomic positions in, by Fourier analysis method, 1004.
- Parthasarathy (S.) on X-ray diffraction in liquid mixtures.—Part I., 90.
- Partial differential equation, $V_i^2 + 2KV = 0$ in a two-dimensional space of constant curvature K , the general solution of, 921.
- Phase rule and membrane equilibria, 273.
- Photographic intermittency effect and the discrete structure of light, 1.
- Plane boundary separating two different media, sources of various kinds near, 625.
- Positive ions in helium, ionization by, 594.
- Potential gradient, the diurnal variation of the space charge and its effect upon the, 719.
- Potential theory of the broadening of spectral lines, limitation of the, 983.
- Pressure shift and broadening of spectral lines, 987.
- Probability problem in integers, 1132.
- Pulsating currents telephony, 571.
- Radiation characteristics of open wire transmission lines, 236.
- Radioactivity and nuclear synthesis, 795.
- of light elements, 156.
- Rakshit (Dr. H.), report on measurement of ionospheric heights at Calcutta during the polar year, 1932-33, 675.
- Raman effect and the complexity of the mercurous and thalious ions, 823.
- Ramlal (N.) and Gibbs (Dr. R. E.), crystallite orientation in a polycrystalline metal during plastic flow, 949.
- Reimann (Dr. A. L.) on the clean-up of various gases by magnesium, calcium, and barium, 1117.
- Rice (S. O.) and Bennett (W. R.), note on methods of computing modulation products, 422.
- Robertson (J.) on the solution of a problem in heat-conduction from a spherical source by the method of wave-trains, 165.
- on the solutions of problems in heat-conduction by the method of wave-trains, 1009.
- Robertson (Dr. J. M.), a two-crystal moving film spectrometer for comparative intensity measurements in X-ray crystal analysis, 729.
- Robinson (Prof. H. R.), X-ray levels and atomic constants, 1086.
- Rosenberg (Dr. R. L.) on the concept of force in wave mechanics, 1150.
- Ruse (Dr. H. S.), the general solution of the partial differential equation, $V_i^2 + 2KV = 0$ in a two-dimensional space of constant curvature K , 921.
- Schwerin (Prof. Dr. Eng. E.), note on the vibration of turbine blades, 728.
- Sederman (Mr. V. G.), the Cu_2Mg phase in the copper magnesium system, 343.
- Sharma (P. N.) and Mohammad (Prof. W.), the hyperfine-structure

- ture of spectrum lines of manganese arc in vacuum.—Part I., 1144.
- Shastri (N. A.) and Dhar (Dr. S. C.) on the parabolic cylinder functions, 401.
- Silberstein (Dr. L.), a probability problem in integers, 1132.
- and Webb (J. H.), the photographic intermittency effect and the discrete structure of light, 1.
- Skin effect in rectangular conductors at high frequencies, 433.
- Sloane (R. H.) and MacGregor (E. I. R.) on an alternating current method for collector analysis of discharge-tubes, 193.
- Small (Dr. J.) on the thermal properties of benzene-air and methyl alcohol-air mixtures, 554.
- Small-scale structure of surfaces, 640.
- Sound, intensity distribution of, from tuning-fork, 441.
- radiation from a condenser discharge, 24.
- Sources of various kinds near a plane boundary separating two different media, 625.
- Space charge, the diurnal variation of, and its effect upon the potential gradient, 719.
- Spark ignition, an experiment relating to the thermal and electrical theories of, 827.
- Specific heat and thermoelectric properties of nickel-chromium alloys, temperature variation of, 470.
- heats of gases at high temperatures, 307.
- Spectral lines, limitation of the potential theory of the broadening of, 983.
- Spectrometer, a two-crystal moving-film, for comparative intensity measurements in X-ray crystal analysis, 729.
- Starkey (T. V.), condensation of thin metallic films: some reflexion observations, 241.
- Stimulus-sensation relation for audition, the determination of, from data on the minimum perceptible changes of intensity, 940.
- Stoddart (E. M.) on the preparation of free hydroxyl, 409.
- Stroboscopic disk in the harmonic analysis of sound-frequency oscillations, 303.
- Stuart (W. S.) on a valve-maintained stretched-wire vibrator, 566.
- Surface resistivity of adsorbed moisture films on glazed porcelain, 63.
- Surfaces, the small-scale structure of, 640.
- Tavani (F.) on a generalization of Lorentz transformation, 187.
- Telephone cable, loaded, alternating and pulsating currents in a, 288.
- Telephony, pulsating currents, 571.
- Temperature variation of the thermoelectric properties and the specific heat of nickel-chromium alloys, 470.
- Thermal properties of benzene-air and methyl alcohol-air mixtures, 554.
- Thermodynamic dissociation constant of benzoic acid at 25° C. from conductivity measurements, 901.
- Thin films, optical properties of, 262.
- Thomson (Prof. G. P.) on the small-scale structure of surfaces, 640.
- Thomson (Dr. J.) on the high-frequency glow discharge, 696.
- Tillman (J. R.), the measurement of mean inner potential, 656.
- Townsend (Prof. J. S.) and Yarnold (G. D.), ionization by positive ions in helium, 594.
- Transverse thermomagnetic effect: a method of measurement, 575.
- Triangle-probability problem in integers, 1132.
- Tuli (G. D.), Bhatnagar (Prof. S. S.) and Mitra (N. G.) on the atomic diamagnetic susceptibility of hydrogen, 449.
- Tuning-fork, the intensity distribution of sound from, 441.
- Tyler (Dr. E.) and Langton (E.), photographic time registration on a falling plate in an experimental determination of "*g*," 352.
- Ultra-short wave generators; the theory of, 832.
- Ultra-violet solar spectrum, on the distribution of energy in, 838.
- Unified statistics, Brillouin's, note on a modification of, 192.
- Valve-maintained stretched-wire vibrator, 566.

- Vibrating reed, a study of an electrically-maintained, and its application to the determination of Young's modulus.—Part I. Theoretical, 1923; Part II. Experimental, 1053.
- Vibration frequency and nuclear separation, relation between, for some simple non-hydride diatomic molecules, 459.
- of turbine blades, note on, 728.
- Viscosity between the melting- and boiling-points, the influence of molecular structure on the variation of, 579.
- data, on a comparison of liquid, 505.
- Vogel (Dr. I.) and Jeffery (George H.) on the determination of the thermodynamic dissociation constant of benzoic acid, at 25°, from conductivity measurements, 901.
- Walke (H. J.), on the radioactivity of light elements, 156.
- , on the structure of atomic nuclei, 129.
- , on the ultimate origin of the actinium series, 256.
- , radioactivity and nuclear synthesis, 795.
- Waller (Miss Mary D.) on the comparison of liquid viscosity data, 505.
- on the influence of molecular structure on the variation of viscosity between the melting- and boiling-points, 579.
- Walmsley (Dr. T.) on the radiation characteristics of open wire transmission lines, 236.
- Wave generators, the theory of ultra-short, 832.
- mechanics, the concept of force in, 1150.
- Wave-propagation, study of the magneto-ionic theory of, by means of conformal representation, 516.
- Wave-trains, the method of, in the solution of a problem in heat-conduction from a spherical source, 165.
- , the method of, in the solutions of problems in heat-conduction, 1009.
- Webb (J.H.) and Silberstein (Dr. L.), the photographic intermittency effect and discrete structure of light, 1.
- Whipp (Dr. Brian), considerations on micro-calorimetry, 745.
- Willott (W. H.) and Evans (Prof. E. F.) on an X-ray investigation of the arsenic-tin system of alloys, 114.
- Wojtaszak (I. A.), deformation of thin cylindrical shells subjected to internal loading, 1099.
- Wood (W. A.), the latent energy due to lattice distortion of cold-worked copper, 495.
- Woodward (Dr. A.), Raman effect and the complexity of the mercurous and thalious ions, 823.
- X-ray crystal analysis, a two-crystal moving film spectrometer for comparative intensity measurements in, 729.
- diffraction in liquid mixtures.—Part I., 90.
- investigation of the arsenic-tin system of alloys, 114.
- levels and atomic constants, 1086.
- Yarnold (G. D.) and Townsend (Prof. J. S.), ionization by positive ions in helium, 594.
- Young's modulus, the determination of, by means of an electrically-maintained vibrating reed.—Part I. Theoretical, 1023; Part II. Experimental, 1053.
